## iWEEK EVENTS AT THE WEST DES MOINES CAMPUS

Steve Wozniak, affectionately known as Woz, was the featured keynote speaker at this year's Innovation Week celebration held on the DMACC West Des Moines Campus. Woz, along with Steve Jobs, teamed up to launch Apple Computer, Inc. Wozniak, whose presentation was downloaded to nearly every West Campus classroom, said that everything digital in a computer today does not go beyond the mathematics level of a fifth-grader. Wozniak graciously spent more than an hour after the presentation signing free autographs for every attendee who wanted one.

Steve Wozniak

Dr. David Gallo, director of special projects at the Woods Hole Oceanographic Institution (WHOI), gave keynote presentations on two different topics—the mapping mission to the RMS *Titanic* and the successful search for the missing aircraft Air France 447. Gallo showed spellbinding video taken from the depths of the ocean floor of the hull of the *Titanic* and artifacts from that ocean liner, creatures living amidst the darkness miles below the ocean surface and even rivers of water flowing on the ocean floor.

Dr. Anthony Paustian, provost of the DMACC West Des Moines Campus, introduces another speaker during iWeek. Paustian is the brainchild behind the iWeek events, which started in 2010. He was instrumental in arranging for Wozniak, Gallo, Fritz Maytag of Anchor Brewing and Maytag Dairy Farms, and other iWeek speakers to come to the DMACC West Campus and inspire the students, faculty, staff and community members with their stories and successes.

## MAJOR GENERAL SAYS MORE EMPHASIS NEEDED ON MATH & SCIENCE

Major General David Mann (left) said falling test scores and fewer Science, Technology, Engineering and Math (STEM) graduates have become a national security issue. Mann was joined by DMACC President Rob Denson (center) and Don Frazer, cofounder of SynGest and a member of the Governor's new STEM Advisory Council, in a news conference recently held at the DMACC West Des Moines Campus. General Mann, commander of the Army's worldwide Recruiting Command, said as our weapons systems become more complex, our soldiers must have better math and science backgrounds to operate them.
